

OPERATIONAL TRAINING MANUAL

Scenario-Based Q&A for Security and Command Personnel

Facility Location: North Central Unit / Benny Magness Unit (NCU/BMU)

Target Audience: Newly Appointed Correctional Officers & Incumbents (<2 Years Service)

Content Framework: Perimeter Security, Control Centers, Shakedown Searches, Count Principles, and Emergency Response Protocols

Effective Operational Date: June 26, 2025 (Updated Term Cycle 2026)

Operational Q&A Manual

This training manual compiles exactly 75 highly practical, scenario-based questions and answers derived directly from institutional policy and directive guidelines. It serves as an evaluation and orientation reference tool for processing routine line operations and critical emergency responses.

Perimeter Security & Gate Controls

Scenario Evaluation 1

Field Context: During a routine outer perimeter vehicle patrol, you notice a fresh, localized erosion area forming a gap under the bottom of the wire mesh fence near a drainage ditch.

Question: What immediate security actions must you initiate according to perimeter watch protocols?

Protocol Directive: You must immediately report the discrepancy to the Shift Supervisor. Per the Complacency Prevention Plan, the Sally Port Officer is responsible for performing daily perimeter checks of perimeter fences, gates, and drainage pipes to detect weaknesses. The ranking officer will supplement the perimeter watch using roving officers or vehicles, log the incident, and submit a 005 incident report to the Chief Security Officer.

Scenario Evaluation 2

Field Context: A large delivery vehicle arrives at the vehicular Sally Port gate at the same time an emergency maintenance crew needs to exit.

Question: Are you permitted to open both the inner and outer gates simultaneously to expedite traffic flow?

Protocol Directive: No. A Sally Port is defined as a secure enclosure with two gates which may never be opened simultaneously unless an active emergency situation is present. One gate must be completely closed and secured before the other gate can be unlocked or opened.

Scenario Evaluation 3

Field Context: The electronic control panel in the East Tower suddenly loses power, rendering the main compound entrance gate completely inoperative.

Question: What operational protocol must be implemented immediately to maintain secure access control?

Protocol Directive: If a gate becomes electronically or mechanically inoperative, it must be operated manually by an assigned Officer. The East Tower Officer must still strictly verify the identity of any person at the gate prior to manual operation.

Scenario Evaluation 4

Field Context: While standing duty in a perimeter tower, you observe an individual sprint across the outer parking lot and attempt to scale the outer perimeter fence.

Question: What immediate notification and logging steps are required of the observing tower officer?

Protocol Directive: The tower officer must immediately notify the shift supervisor and Master Control. They must check their area of observation to ensure no other security breach is occurring, log the activation and observation details in the Security Log, and comply with specific post orders to maintain visual surveillance.

Scenario Evaluation 5

Field Context: You are completing your hourly log entries in the West Tower during a night shift.

Question: What is the mandatory telephone check-in frequency required between the perimeter towers to prevent complacency?

Protocol Directive: Tower Officers are required to maintain telephone contact at least every thirty (30) minutes with the other towers (e.g., West Tower contacting East/North Towers) to verify posts are secure and establish a constant visual surveillance net.

Scenario Evaluation 6

Field Context: An ambulance responding to a severe medical emergency inside a housing barracks arrives at the vehicular Sally Port gate.

Question: What unique exception allows both Sally Port gates to be opened simultaneously for this vehicle?

Protocol Directive: Simultaneous gate opening is authorized as an exception only in case of emergency medical or fire equipment entrance (not exit), and only when the responding emergency vehicle is explicitly restricted by space within the sally port enclosure.

Scenario Evaluation 7

Field Context: A dense fog rolls over the facility grounds at dusk, completely obscuring the visibility between the perimeter towers and the main compound buildings.

Question: What actions must the ranking security officer on duty take to ensure perimeter integrity?

Protocol Directive: The ranking security officer on duty must immediately take appropriate action to supplement the perimeter watch through the active deployment of roving officers, roving vehicles, or other tactical means, and must immediately notify the Chief Security Officer.

Scenario Evaluation 8

Field Context: The electronic perimeter surveillance system alarm sounds in the Main Control Center, pointing to a trip in Zone 4.

Question: What are the exact steps before the Control Center Operator is allowed to reset the alarm console?

Protocol Directive: Upon being notified of the alarm, the corresponding Tower Officer must immediately check their area of responsibility to ensure no unauthorized traffic or breach has occurred, and log it. The Control Center Operator is strictly prohibited from resetting the system until the towers have actively verified that no breach of security has occurred.

Scenario Evaluation 9

Field Context: You are the Outside Perimeter Rover Officer on duty, patrolling the external grounds in a facility vehicle.

Question: Are you permitted to carry your personal cell phone or listen to a personal radio while inside the patrol vehicle?

Protocol Directive: No. Outside Perimeter Rover Post Orders explicitly dictate that the Rover Officer is strictly prohibited from having a personal cell phone or any personal electronic device in the perimeter vehicle while on duty.

Scenario Evaluation 10

Field Context: While patrolling the external perimeter road, an inmate assigned to an outside work detail walks toward your stationary patrol vehicle to ask a question.

Question: What strict physical distance boundary must you enforce between the inmate and your patrol vehicle?

Protocol Directive: Per the Rover Post Orders, you must ensure that no inmate comes within thirty (30) feet of the perimeter patrol vehicle unless explicitly authorized by the Warden or an administrative designee.

Scenario Evaluation 11

Field Context: You are a Tower Officer standing watch on the catwalk during an active inmate recreation period on the yard.

Question: What are the weapon-handling mandates required of you while standing on the catwalk?

Protocol Directive: Tower Officers must stay completely alert on the catwalk with their weapon directly in hand or utilizing the shoulder strap while standing when inmates are present on the yards. At no time may the officer place the weapon anywhere except the gun rack inside the tower structure.

Scenario Evaluation 12

Field Context: A commercial truck driver arrives at the outer perimeter gate seeking entrance to drop off warehouse supplies.

Question: What is the identity verification standard required before the gate officer can actuate the electronic gate lock?

Protocol Directive: Prior to opening any perimeter gate, the controlling Tower Officer must be completely certain of the precise identity and authorization of the person or persons at the gate.

Scenario Evaluation 13

Field Context: An administrative staff member needs to exit the inner compound through the main gate after normal business hours when the Entrance Building is unstaffed.

Question: What operational notification must occur before the tower can actuate the gate?

Protocol Directive: After business hours, when the Entrance Building is unstaffed, the East Tower Officer must immediately notify the on-duty Shift Supervisor, who will ensure the individual is properly verified, logged, and escorted out.

Scenario Evaluation 14

Field Context: During a period of pitch darkness, the East Tower Officer needs to conduct a mandatory light check along the outer fence line.

Question: What is the unscheduled light-check procedure required between the towers?

Protocol Directive: During hours of darkness, unscheduled light checks must be initiated by the East Tower (three or more times per hour). Tower officers must answer the check by actively shining their spotlight back to the tower that sent the light check, and all light contacts must be formally logged.

Scenario Evaluation 15

Field Context: An inmate on the recreation yard approaches the fence line to retrieve a stray ball.

Question: What is the minimum distance inmates must maintain from the perimeter fence wire at all times?

Protocol Directive: Tower and Rover Post Orders explicitly state that inmates are strictly prohibited from climbing on, touching, or coming within five (5) feet of the perimeter fence at any time.

Control Centers & Communications

Scenario Evaluation 16

Field Context: An inmate runner arrives at the Master Control Center door requesting to enter the administrative area to drop off a counseling folder.

Question: Under what strict conditions are inmates permitted access into the administrative office spaces?

Protocol Directive: The only inmates allowed access to the administrative area are those explicitly assigned to that area by the institutional classification committee, or those directly escorted under the personal request of the Warden, Deputy/Assistant Warden, or Chief Security Officer.

Scenario Evaluation 17

Field Context: You are the newly assigned Officer to the Isolation Control Booth inside the restrictive housing unit.

Question: What are the four specific, separate permanent logbooks that you are required to maintain throughout your shift?

Protocol Directive: The Isolation Control Booth Officer is responsible for accurately maintaining and logging the following four distinct logbooks: the Movement Log, the Daily Security Logs, the Hunger Strike Log, and the Key Logs.

Scenario Evaluation 18

Field Context: You are the Control Booth Officer inside an active living barracks housing unit.

Question: What is the mandatory frequency for conducting called security checks with Master Control?

Protocol Directive: Control Booth Officers must maintain constant communication with Master Control through formal security checks called and logged exactly every thirty (30) minutes across the entirety of the shift.

Scenario Evaluation 19

Field Context: A shift relief is taking place at the Master Control Center post.

Question: What are the primary operational responsibilities of the Master Control post regarding institutional keys?

Protocol Directive: The Master Control Center serves as the main security hub and is strictly responsible for controlling, storing, and issuing all security keys in rigid compliance with the Unit key control policy.

Scenario Evaluation 20

Field Context: A sudden local telephone line failure disconnects the Entrance (PBX) Building from the outside public network.

Question: What specialized training are Control Center and Entrance Building officers required to have to mitigate communication failures?

Protocol Directive: All control center, tower, and entrance building officers must receive specialized training in the operation of both telephone equipment and radio communications to maintain inter-post links during network outages.

Scenario Evaluation 21

Field Context: The Master Control Operator notices a fire alarm indicator flashing on the central annunciator console for the industrial laundry room.

Question: What immediate routing actions must the Master Control Officer take?

Protocol Directive: The Master Control Officer must immediately notify the Shift Supervisor, sound the appropriate alert, notify all affected security posts, coordinate emergency staff movement via electronically operated doors, and log the exact time of the alarm.

Scenario Evaluation 22

Field Context: An officer assigned to a barracks control booth is tasked with monitoring the sanitation of the living area.

Question: What specific housekeeping control duty is delegated exclusively to the booth post?

Protocol Directive: The barracks control booth officer is held directly responsible for securing, controlling, and tracking the formal issuance of all cleaning supplies and chemical equipment utilized within the living quarters.

Scenario Evaluation 23

Field Context: The Master Control Center needs to clear the formal mid-day institutional head count.

Question: What notification responsibility rests on the Master Control post regarding head counts?

Protocol Directive: Master Control is responsible for notifying all security posts across the entire facility the exact moment that a formal head count is started, and again the exact moment that the count is verified and cleared.

Scenario Evaluation 24

Field Context: A vendor arrives at the Entrance (PBX) Building checkpoint to service a copy machine during a weekend shift.

Question: What logbook entries must be recorded at this post for non-employee entries?

Protocol Directive: The Entrance Building post must record a complete record of all visitors, occasional agents, and vendors, including their full name, address, explicit destination, arrival/departure times, and a notation of credentials.

Scenario Evaluation 25

Field Context: A minor electrical failure causes the electronic locks on the main administration hallway doors to fail-secure.

Question: How must Master Control handle the movement of emergency response staff through these doors?

Protocol Directive: The Master Control Officer must utilize the manual override backup keys to operate the doors manually, while ensuring that all security checks called every 30 minutes are continuously maintained with Master Control.

Unit Inspections & Log Verification

Scenario Evaluation 26

Field Context: You are a Shift Sergeant assembling the permanent security log sheets at the conclusion of an evening shift.

Question: What is the mandatory operational routing path for these logs before they reach the security file?

Protocol Directive: Permanent logs must be assembled daily by the Shift Sergeant, thoroughly reviewed and signed by the on-duty Shift Supervisor, and then submitted directly to the Building Major's Office for administrative oversight.

Scenario Evaluation 27

Field Context: A Shift Supervisor is conducting a daily patrol circuit through the main kitchen and dining facility.

Question: What daily environmental metrics must be actively verified and logged by administrative, medical, or dietary staff?

Protocol Directive: Personnel are required to check and document refrigerator temperatures and water temperatures on a daily basis to maintain health and safety standards.

Scenario Evaluation 28

Field Context: You are an officer conducting a formal visual inspection of the steel security bars in an isolation cell.

Question: What specific physical indicators are you searching for to detect tampering or structural weakness?

Protocol Directive: You must inspect for bent or spread bars, broken welds, cracked window frames, inoperable cell locks, and any evidence of tampering or weakness, such as fresh paint or discolored areas covering saw marks.

Scenario Evaluation 29

Field Context: A Shift Supervisor detects an inoperable lock on a fire exit door during a daily safety patrol.

Question: What documentation and reporting actions must be initiated immediately?

Protocol Directive: The Shift Supervisor must immediately complete a maintenance work order request and submit it to the maintenance supervisor. The discrepancy must be reported on a 005-incident report and forwarded to the Chief Security Officer.

Scenario Evaluation 30

Field Context: The Fire and Safety Officer is scheduling quarterly security gear audits.

Question: What is the testing mandate for emergency backup keys and their respective locks?

Protocol Directive: All emergency keys must be physically checked and tested inside their respective structural locks at least quarterly, and the results must be fully documented in writing by the Fire and Safety Officer.

Scenario Evaluation 31

Field Context: You are a Correctional Officer assigned to a fixed housing post for the past eleven consecutive months.

Question: What is the maximum duration an officer can remain on a single shift assignment under the Complacency Prevention Plan?

Protocol Directive: To prevent institutional complacency, security staff assigned to a security shift must be rotated from their specific areas of assignment at a minimum of every six (6) months and a maximum of twelve (12) months.

Scenario Evaluation 32

Field Context: It is noon, and a mass inmate feeding schedule is starting in the main dining hall.

Question: What statement-of-presence action is required of security supervisors and administrative leadership under the rotation plan?

Protocol Directive: Correctional Officers, Rovers, Sergeants, Shift Supervisors, Captains, the Chief of Security, and the Warden must demonstrate an active security presence during feeding schedules by 'Standing the Mainline' to observe security operations.

Scenario Evaluation 33

Field Context: A Building Security Captain is auditing the documentation of the living blocks.

Question: What is the review frequency required of the Shift Commander regarding the barracks security logs?

Protocol Directive: The Shift Commander (Building Captain) must conduct comprehensive weekly reviews of all security logbooks to ensure absolute operational accuracy and direct compliance with Department and Unit policies.

Scenario Evaluation 34

Field Context: A Fire and Safety Officer is initiating a monthly comprehensive inspection of a housing building.

Question: What specific safety hardware and suppression equipment must be physically audited monthly?

Protocol Directive: The Fire and Safety Officer must conduct a monthly inspection of all structural buildings to verify all emergency exit doors, test all fire extinguishers, inspect all Self-Contained Breathing Apparatus (SCBA) units, and audit sprinkler heads.

Scenario Evaluation 35

Field Context: The Chief Security Officer is preparing a structural integrity report for the Warden.

Question: What is the inspection frequency for all structural security devices needing repair or preventative maintenance?

Protocol Directive: The Chief Security Officer or a qualified designee must conduct at least weekly inspections of all security devices needing repair or maintenance, and report the results in writing directly to the Warden.

Searches & Contraband Suppression

Scenario Evaluation 36

Field Context: A staff member arriving for work is selected for a random pat search at the primary screening checkpoint.

Question: What form must be utilized to document staff searches, and where is it filed?

Protocol Directive: All staff searches must be strictly documented either on Form F-401-4 or on a separate report, and the physical record must be placed directly into the daily security file.

Scenario Evaluation 37

Field Context: During a primary entrance search of a staff member, a scanning officer intercepts three bundles of hidden contraband intended for introduction into the compound.

Question: What are the immediate operational and legal steps that must be executed?

Protocol Directive: The staff member must be removed from the facility immediately. The incident must be reported directly to the Warden and the Internal Affairs Division, and details must be forwarded to the Prosecuting Attorney for criminal prosecution.

Scenario Evaluation 38

Field Context: A visitor arrives at the visitation screening desk and displays highly erratic, suspicious behavior.

Question: Are you authorized to strip search this visitor based on superficial suspicion or curiosity?

Protocol Directive: No. Visitors are free-world persons and not inmates. Searches must be properly authorized, and visitors must never be subjected to body searches as a result of superficial suspicion or curiosity. Any unusual behavior must be reported up the chain of command.

Scenario Evaluation 39

Field Context: A family member arrives for a scheduled social visit with an inmate.

Question: What are the routine screening search steps required before admitting the visitor to the visiting room?

Protocol Directive: The visitor must pass through the walk-through metal detector. Once cleared, a thorough pat search must be conducted. This pat search may be professionally conducted by an employee of either gender while maintaining absolute courtesy.

Scenario Evaluation 40

Field Context: An officer is preparing to conduct a standardized pat/frisk search on an individual at an internal security checkpoint.

Question: What instructions must be given regarding outer garments and pocket contents?

Protocol Directive: The individual must remove all outer clothing (raincoats, heavy jackets, etc.) and head/footgear for inspection. They must remove all items from their pockets and present them, along with any containers, to the examining officer.

Scenario Evaluation 41

Field Context: An inmate is selected for a mandatory strip search following an unescorted work detail.

Question: What parts of the inmate's footwear require specific structural scrutiny during a strip search?

Protocol Directive: The examining officer must closely inspect the footwear, paying special attention to the structural condition of the soles, the heels, and the inner linings where contraband like hacksaw blades or narcotics could be hidden.

Scenario Evaluation 42

Field Context: You are an officer executing a systematic shakedown search of an inmate barracks living area.

Question: What detailed items inside the shared restroom facilities must be inspected under the search guidelines?

Protocol Directive: You must search in and under washbasins, probe inside faucets and drains, check behind ventilating grilles to ensure nothing is suspended, examine toilet paper containers/dispensers, and check behind shower curtains and all curtain folds.

Scenario Evaluation 43

Field Context: During a systematic barracks shakedown, you find several personal cosmetic and hygiene items on an inmate's shelf.

Question: What is the specific search technique required for checking tubes of toothpaste or shaving cream?

Protocol Directive: The searching officer must check any tubes of toothpaste, cosmetic cream, or lotion by physically squeezing the tube to ensure that no hard contraband or narcotics are concealed inside the product.

Scenario Evaluation 44

Field Context: A mass shakedown search of a living unit cell has just concluded.

Question: What is the strict professional standard regarding the final condition of the cell and the inmate's personal property?

Protocol Directive: When a cell search is completed, the room must be left exactly the way it was found, never in disorder. Inmate personal property must be respected and never willfully discarded, broken, or misplaced.

Scenario Evaluation 45

Field Context: A work area supervisor wants to conduct a comprehensive search of a vocational welding shop.

Question: Whose prior knowledge and consent is required before initiating a general area search, and what follows?

Protocol Directive: A general area search of shops or work areas must be conducted with the knowledge and consent of the Chief Security Officer. After the search, a written report describing the scope must be filed with the Chief Security Officer.

Entrance Building Screening

Scenario Evaluation 46

Field Context: An individual seeking entry to the unit places a backpack and a winter coat onto the conveyor belt of the primary security checkpoint.

Question: What is the Step-One entry requirement for personal property entering the facility?

Protocol Directive: Step-One requires the absolute X-ray scanning of all personal property. All items must be removed from pockets and placed into a designated container (including jackets, shoes, belts, food, bags) to be scanned by the Screening Officer.

Scenario Evaluation 47

Field Context: A visitor steps through the Walk-Through Metal Detector and triggers an audible alarm indicator.

Question: How many total attempts is an individual permitted to clear the walk-through detector before the Duty Warden is contacted?

Protocol Directive: An individual is permitted a maximum of three (3) attempts to clear the Walk-Through Metal Detector. If they fail to clear after three attempts, entry staff must immediately contact the Duty Warden.

Scenario Evaluation 48

Field Context: An employee triggers the walk-through metal detector three consecutive times, and the on-duty Duty Warden arrives at the checkpoint.

Question: What direct order must the Duty Warden issue to the employee under these circumstances?

Protocol Directive: The Duty Warden will give a direct order to the employee to submit to a comprehensive strip search, which must be conducted in a private area by an entry officer of the same gender.

Scenario Evaluation 49

Field Context: A visitor successfully clears the metal detector and is directed to Step Four: the Advanced Imaging Scanner.

Question: What strict rule exists regarding who is authorized to view the resulting image scan console?

Protocol Directive: Only explicitly trained screening staff, such as screening officers, the Major, the Deputy Warden, and the Warden, are permitted to view body scans. The individual being scanned is strictly prohibited from viewing their own scan.

Scenario Evaluation 50

Field Context: The Advanced Imaging Scanner displays a bright overlay anomaly near an arriving staff member's left thigh.

Question: What immediate post actions must the Screening Officer execute regarding this anomaly?

Protocol Directive: Any anomaly identified by the scanner results in an immediate search by staff. The item must be removed by the individual for examination. If it is contraband, it is confiscated, the Duty Warden is contacted, and the person is rescanned.

Scenario Evaluation 51

Field Context: A correctional officer at the screening checkpoint decides to abandon their entry attempt and turn around to walk back to their personal vehicle.

Question: What disciplinary action is triggered by an employee attempting to withdraw from the screening checkpoint?

Protocol Directive: Any staff member who attempts to withdraw from an ongoing screening checkpoint search is subject to immediate disciplinary action, which carries a mandatory penalty of termination for insubordination.

Scenario Evaluation 52

Field Context: A contractual agent visitor arriving at the facility fails to clear the electronic security checkpoints.

Question: What is the mandatory gate control response for contractual agents who fail screening?

Protocol Directive: Contractual agents who are unable to clear all security checkpoints will be immediately denied entry to the facility and may be permanently barred from all facilities within the Division of Correction.

Scenario Evaluation 53

Field Context: A local law enforcement detective arrives at the Entrance Building to interview an inmate regarding an outside case.

Question: What are the logging and identification mandates required for law enforcement entries?

Protocol Directive: The officer must present official law enforcement ID, be logged into the 'Visitors/Occasional Agents Sign In Log,' be issued a red numerical ID badge displayed conspicuously, and be continuously escorted to and from their destination.

Scenario Evaluation 54

Field Context: An emergency scan needs to be run on an inmate brought to the Entrance Building from an off-site transport.

Question: What is the standard power/sensitivity setting required on the Advanced Imaging Scanner for inmates?

Protocol Directive: All inmates brought to be scanned, inmate visitors, or any other person deemed to only visit occasionally must be scanned on the 'High' power/sensitivity setting unless otherwise approved by the Chief of Security or Duty Warden.

Scenario Evaluation 55

Field Context: An anomaly is confirmed on an individual during their initial scan, and the entry staff need to conduct a second follow-up scan.

Question: Who must be contacted immediately before a second advanced imaging scan is initiated?

Protocol Directive: If an anomaly is identified during the initial scan, Front Entrance Staff must contact the Zone Supervisor or the Shift Supervisor immediately before a second scan can be conducted.

Inmate Counts & Movement Controls

Scenario Evaluation 56

Field Context: The formal 17:00 facility head count is called, and the initial tally received by the count room fails to balance.

Question: What immediate directive must the Shift Supervisor issue to the compound?

Protocol Directive: If the count does not clear on the first run, the Shift Supervisor must immediately notify the Shift Commander and order a full, immediate recount of all facility areas.

Scenario Evaluation 57

Field Context: The formal recount (second count) has concluded, and the head count is still unable to clear.

Question: What type of count is ordered for the third count, and what physical steps are required of the barracks officer?

Protocol Directive: The Chief Security Officer will order a 'Roster Count' (third count). All inmates working within the fence must return to their living quarters. The barracks officer must verify each inmate face-to-face and place a checkmark on the roster.

Scenario Evaluation 58

Field Context: The third count has cleared the internal compound, but regional maintenance crews are still outside, and the total facility count is still off on the fourth run.

Question: What type of count is declared by the Warden, and what happens to outside maintenance crews?

Protocol Directive: An 'Emergency Count' is declared by the Unit Warden or Duty Warden. All Regional Maintenance Crews must be returned to the Unit immediately. The barracks officer counts each inmate on their assigned bed against the roster.

Scenario Evaluation 59

Field Context: A formal head count is called while inmates are inside an open-bay barracks living unit.

Question: What is the physical position requirement for all inmates inside an open barracks during a count?

Protocol Directive: While counting open barracks, all inmates must remain completely stationary on their individual assigned rack or bed until the count is officially cleared across the institution.

Scenario Evaluation 60

Field Context: An active head count is being conducted inside a housing barracks.

Question: What structural locations inside the barracks is the counting officer personally responsible for checking?

Protocol Directive: The counting officer is directly responsible for checking all bathrooms, showers, dayrooms, and any other ancillary spaces of the barracks to ensure no inmates are hidden or missing.

Scenario Evaluation 61

Field Context: A master count has stalled, and the count room is waiting for figures from an industrial work area.

Question: At what exact elapsed time mark must the Chief Security Officer and Warden be formally notified of an uncleared count?

Protocol Directive: The Chief Security Officer must be notified any time a count has not cleared within a thirty (30) minute time period. The Chief Security Officer must immediately notify the Warden and Deputy/Assistant Warden.

Scenario Evaluation 62

Field Context: A mass movement call is initiated, and hundreds of inmates begin moving down the main corridor hallway.

Question: What hardware controls must be utilized by Master Control to monitor and regulate this movement?

Protocol Directive: Master Control must utilize the electrically controlled riot gates and security cameras located at regular intervals throughout the main hallway to closely control, segment, and monitor mass inmate movement.

Scenario Evaluation 63

Field Context: An inmate needs to cross the main compound to attend a mandatory educational class during an unscheduled hour.

Question: What document is required to authorize temporary inmate movement across the compound?

Protocol Directive: A formal gate pass or approved lay-in list is required for any activity or movement that requires an inmate to move temporarily across or off the unit outside of standard mass movement schedules.

Scenario Evaluation 64

Field Context: A Regional Maintenance Crew is preparing to board an institutional bus to leave the facility for a road detail.

Question: What count requirement must be executed prior to allowing the transport vehicle to leave the Sally Port gate?

Protocol Directive: Per the Post Orders, a formal head count must be conducted and verified by the supervisor prior to allowing the transport vehicle to leave the area to ensure absolute accountability.

Scenario Evaluation 65

Field Context: You are a Barracks Officer preparing to submit your finalized count sheet to the Shift Supervisor.

Question: What forms and logs from the count must be archived, and where are they filed?

Protocol Directive: All count records, including the Barracks Count Sheets, the Barracks Bed Roster, and the master Barracks Roster, must be carefully compiled and archived directly into the Daily Security File.

Use of Force & Emergency Protocols

Scenario Evaluation 66

Field Context: An inmate inside a restrictive housing cell suddenly turns violent, barricades the door, and starts smashing structural fixtures.

Question: Define the difference between an 'Immediate Use of Force' and a 'Planned Use of Force' in this situation.

Protocol Directive: An Immediate Use of Force occurs when an inmate's behavior constitutes an immediate, serious threat to life or security, preventing staff from seeking supervisor assistance. A Planned Use of Force applies when an inmate is isolated and there is no immediate threat, requiring supervisor approval and video recording.

Scenario Evaluation 67

Field Context: An officer utilizes their issued Oleoresin Capsicum (OC) spray canister to subdue a combative inmate during an Immediate Use of Force.

Question: What is the mandatory clinical decontamination requirement for the contaminated inmate?

Protocol Directive: Any inmate contaminated with OC spray during a use of force must be afforded an immediate opportunity to thoroughly decontaminate with water and must be promptly examined by qualified medical staff.

Scenario Evaluation 68

Field Context: *An inmate has been placed into the Restraint Chair following an incident of severe self-injurious behavior.*

Question: What is the mandatory logging and observation frequency required of security staff?

Protocol Directive: Security and safety checks of an inmate secured in the Restraint Chair must be conducted and documented in the log with the actual time recorded twice (2 times) every thirty (30) minutes.

Scenario Evaluation 69

Field Context: *An inmate remains non-compliant after being secured inside the Restraint Chair for a continuous two-hour block.*

Question: What is the medical evaluation frequency required for an inmate held inside the Restraint Chair?

Protocol Directive: Qualified medical staff must physically examine an inmate secured in the Restraint Chair a minimum of once every two (2) hours to ensure health, safety, and proper circulation.

Scenario Evaluation 70

Field Context: *You are the first security officer to arrive at the scene of a severe inmate-on-inmate assault where criminal acts are suspected.*

Question: What are your exact duties as the first non-involved employee on the scene?

Protocol Directive: The first employee on the scene not involved in direct rescue or first aid must immediately secure the scene, ascertain the identities of all individuals present for later interviews, and disperse all unauthorized individuals.

Scenario Evaluation 71

Field Context: *A Shift Supervisor has activated a Coordinated Response Plan following a formal report of an active Prison Rape Elimination Act (PREA) incident.*

Question: Who are the only individuals permitted to enter a secured PREA crime scene?

Protocol Directive: The only individuals permitted to enter a secured PREA crime scene are investigators from the Arkansas State Police (ASP), the designated facility internal investigator, or essential medical staff as needed.

Scenario Evaluation 72

Field Context: A PREA sexual assault allegation involves a suspected exchange of bodily fluids that occurred within the past 48 hours.

Question: What specific forensic instructions must you give the victim and perpetrator to protect physical evidence?

Protocol Directive: You must strictly instruct both the victim and the perpetrator to avoid taking any actions that destroy physical evidence, including washing, showering, brushing teeth, changing clothes, urinating, defecating, drinking, or eating.

Scenario Evaluation 73

Field Context: You are a housing officer processing a PREA incident report at the computer terminal.

Question: What are the three specific entries required when opening a suspected PREA report in eOMIS?

Protocol Directive: Staff must open the report before the end of their shift, select the correct incident type, check 'YES' to the Suspected PREA prompt, list the names/levels of involvement of all staff and inmates, and refer it to the Warden and PCM.

Scenario Evaluation 74

Field Context: An incident involving an institutional disturbance results in a significant Use of Force.

Question: By what deadline must the comprehensive Use of Force Report (005/409) be submitted to the Warden?

Protocol Directive: The finalized Use of Force Report, including all attached medical and mental health evaluation reports, must be formally submitted to the Warden or administrative designee no later than the end of that specific tour of duty.

Scenario Evaluation 75

Field Context: An Electronic Control Device (Taser) is discharged by an officer during an immediate tactical intervention.

Question: What accountability steps must occur regarding the spent cartridge and armory tracking?

Protocol Directive: The used Taser cartridge must be turned in to the appropriate Captain or designee, who will forward it to the Central Armorer for tracking and replacement. All incident details must be logged on forms 005 and 409.

Scenario Evaluation 76

Field Context: An officer is checking structural parameters inside an inmate cell during a morning block shakedown.

Question: What specific technique must be utilized to test structural integrity of individual window crossbars?

Protocol Directive: The examining officer must utilize the physical tapping method using a rubber mallet along the crossbars and window frames to check for cuts, structural weakness, or evidence of tampering [cite: 112, 1 Barracks Post Orders M].

Scenario Evaluation 77

Field Context: During a living area shakedown, you locate several personal letters, envelopes, and hobby craft books.

Question: What is the correct protocol for searching paper-based items for hidden contraband?

Protocol Directive: Officers must carefully examine and fan out all clothing, envelopes, books, magazines, pens, and markers to determine if any micro-contraband, hacksaw blades, or thin narcotics sheets are hidden inside them [source: 349].

Scenario Evaluation 78

Field Context: An inmate placed in the restraint chair continues displaying intense psychological distress after initial checks.

Question: What are the specific requirements for updating log files regarding changes in the inmate's visual state?

Protocol Directive: All checks must be documented in the permanent log with actual times recorded by the observer, noting precise changes in behavioral details, comments on physical condition, and any clinical actions called [source: 486, 487].

Scenario Evaluation 79

Field Context: A planned force intervention team is being assembled for a non-compliant inmate who has locked himself in an isolation cell.

Question: What protective gear must staff equip, and what training refresher must be verified annually?

Protocol Directive: Staff must equip approved structural tactical protective gear (helmets, shields, pads, gloves) and must receive regular annual refresher training regarding physical force techniques and tracking communicable diseases [source: 544, 545].

Scenario Evaluation 80

Field Context: An initial noon count fails to balance, and the recount is also called as uncleared.

Question: What tracking process occurs on the third count attempt inside the housing units?

Protocol Directive: The third attempt transitions into a full Roster Count. All inmates must return to their living bays, and staff must conduct an exact face-to-face check, marking each individual verified directly onto the Barracks Roster sheet [source: 685, 686].

Scenario Evaluation 81

Field Context: An Emergency Count is officially declared across the compound following a multi-stage count mismatch.

Question: What are the immediate operational rules regarding external regional work crews?

Protocol Directive: All Regional Maintenance and external work crew squads must be returned immediately to the compound inside the perimeter fence, counted at their living unit racks, and roster check sheets must be delivered to the Shift Supervisor [source: 690-693].

Scenario Evaluation 82

Field Context: An arriving vendor carrying high-end electronic testing tools passes the property container through the checkpoint X-ray scanner.

Question: What action is triggered if an entry container's visual contents present unclear shapes on the scanning monitor?

Protocol Directive: The Screening Officer must perform a complete visual inspection of all incoming containers, sacks, boxes, and packages to prevent any introduction of contraband items before granting compound entry [source: 4, 85].

Scenario Evaluation 83

Field Context: An arriving visitor with metal pins inside their knee fails to pass cleanly through the Walk-Through Metal Detector unit.

Question: What subsequent screening procedure must be triggered to locate the source of the metal alarm?

Protocol Directive: A handheld metal detector wand must be utilized by entry staff to isolate the specific anatomical area where the metal is located, followed by a professional pat search of that specific area [source: 303, 304].

Scenario Evaluation 84

Field Context: A staff member attempts to rush past the Advanced Imaging Scanner booth, citing an urgent call inside the block.

Question: What entry policy standard governs compliance with all structural screening checkpoints for staff?

Protocol Directive: Any individual (staff, visitor, or vendor) seeking entry must clear all physical and electronic security checkpoints. Failure to comply or cooperate results in immediate denial of entry and mandatory termination for insubordination [source: 614, 646].

Scenario Evaluation 85

Field Context: A severe weather alert is broadcast, indicating a flash flood or tornado boundary over the facility county.

Question: What are the Shift Commander's immediate precautionary tracking authorities?

Protocol Directive: The Shift Commander (Captain) can activate Emergency Lock Down Procedures as a precautionary measure to freeze all movement, secure all structural blocks, and coordinate emergency radio lines [cite: BMU 8.05.00, VI.D].

Scenario Evaluation 86

Field Context: A severe structural fire emergency causes the partial evacuation of an active living block.

Question: What specific tracking tool must the responding barracks officer retrieve to ensure inmate accountability at the assembly site?

Protocol Directive: The barracks officer must deliver the explicit block exit keys and secure the master Barracks Roster sheet to verify face-to-face count status once relocated to the designated safe zone assembly area [cite: BMU 8.05.00, VI.A].

Scenario Evaluation 87

Field Context: You are assigned to the High-Stress Restrictive Housing Unit as a block officer.

Question: What are the daily supervisory evaluation metrics that affect your post assignment continuity?

Protocol Directive: All staff assigned to high-stress units are evaluated daily by immediate supervisors regarding performance fitness and professional judgment. Post assignments are rotated regularly to prevent stress-induced complacency [source: 187, 189].

Scenario Evaluation 88

Field Context: An inmate runner approaches the administrative gate barrier with a box of files from educational services.

Question: What corridor hallway hardware tool is actively used to control and segment inter-zone movement?

Protocol Directive: The electrically controlled riot gates positioned at regular structural intervals throughout the main hallway corridor must be utilized to actively segment and monitor all pedestrian traffic [source: 775].

Scenario Evaluation 89

Field Context: A regional utility worker is brought inside the compound to repair an industrial kitchen pipeline.

Question: What strict control rule governs non-employee contractors who carry technical tool inventories?

Protocol Directive: All contract tradesmen must submit to a complete physical inventory of tools prior to entry and exit, and must be continuously escorted by a security employee to verify no tools are left behind [source: 578-580].

Scenario Evaluation 90

Field Context: An inmate inside an isolation cell is ordered to receive a morning medication delivery during a behavior status period.

Question: What physical commands must the block officer give the inmate before unlocking the outer cell door hatch?

Protocol Directive: Prior to entering or opening the door, the inmate must be given direct orders to move to the back of the cell, get down on their knees facing the wall away from staff, and clasp their hands behind their head without moving [source: 718, 792, 793].

Scenario Evaluation 91

Field Context: During an inspection of a living unit bunk area, you identify a loose floor seam near a corner locker block.

Question: What form must be submitted, and who reviews structural damage reports weekly?

Protocol Directive: A structural maintenance work request must be filled out immediately, and all recorded repair items must be reviewed weekly by the Shift Commander and Chief Security Officer to verify compliance [source: 105, 118, 721].

Scenario Evaluation 92

Field Context: An assigned inmate porter is instructed to complete the nightly deep-cleaning pass of the restrictive housing tier hallway.

Question: What security observation net must be maintained over the porter during this task?

Protocol Directive: The inmate porter assigned to clean any portion of the Restrictive Housing Area must remain under constant, direct visual security supervision by an officer at all times [source: 717].

Scenario Evaluation 93

Field Context: A newly hired non-security employee begins their first week of work within the facility administrative block.

Question: What mandatory orientation training timeline governs their safety instruction curriculum?

Protocol Directive: Newly hired non-security staff must complete a 40-hour New Employee Orientation and pass the Correctional Security for Non-Security course during their initial year of employment [source: 582, 583].

Scenario Evaluation 94

Field Context: An officer is preparing for shift relief at an armed tower security post.

Question: What weapon checking process must be executed face-to-face before the post can be relieved?

Protocol Directive: The relieving process requires full physical accounting of all firearms and ammunition, including completely unloading and reloading the weapons to verify optimal functional condition, followed by signing a formal inventory form [cite: East Tower Post Orders, IV.A].

Scenario Evaluation 95

Field Context: A severe steam leak or utility line rupture occurs inside the main kitchen during food preparation cycles.

Question: What immediate evacuation step is required of the supervising kitchen security lieutenant?

Protocol Directive: The supervising lieutenant must immediately contact Inside Maintenance, sound the tactical alarm, and evacuate all personnel through the emergency exits as outlined in the facility manual [cite: Food Service Corrections Lieutenant Post Orders, IX.O].

Scenario Evaluation 96

Field Context: An inmate file needs to be accessed by a case manager to check upcoming classification dates.

Question: Where are secure paper-based institutional files housed, and what baseline control tracks them?

Protocol Directive: All inmate institutional records are strictly housed inside the locked Records Vault. Access is tracked via a physical sign-out card recording employee name and date of removal, under the direct control of the Records Supervisor [cite: BMU 6.01.00, D].

Scenario Evaluation 97

Field Context: A Fire and Safety Officer is verifying the operational state of emergency keys across all shifts.

Question: What is the physical locking check metric required for these specialized emergency tools?

Protocol Directive: Emergency fallback keys must be verified inside their specific respective locks at least quarterly, and all results must be filed inside the master unit security index [source: 113, 158].

Scenario Evaluation 98

Field Context: A newly assigned sergeant is taking over the morning shift briefing inside the roll call room.

Question: What tracking items must be communicated and documented during the shift briefing cycle?

Protocol Directive: The briefing must cover specific block problems, problem inmates, changes in department or unit policies, uniform/grooming inspections, and mock incident training topics [cite: Building Sergeant Post Order, II.B].

Scenario Evaluation 99

Field Context: An incoming visitor arrives with multiple bags of purchased commercial items for delivery to the commissary.

Question: What structural screening check is mandatory for all packages crossing the entry threshold?

Protocol Directive: All inbound items, sacks, containers, and packages must pass a complete physical and visual shakedown search to intercept hidden contraband before crossing the inner sally port perimeter line [source: 4, 69].

Scenario Evaluation 100

Field Context: *An off-duty security employee applies to participate in an outside secondary employment role at a local commercial business.*

Question: What administrative priority governs their duty allocation under department regulations?

Protocol Directive: An employee's primary work duties, obligations, and professional responsibilities are strictly dedicated to the Department. Secondary employment may only be authorized when it does not conflict with institutional requirements [source: 805, 806].

Scenario Evaluation 101

Field Context: *A security incident report needs to document a spontaneous comment made by an inmate witness during a disturbance.*

Question: What precise documentation parameters must the reporting employee follow?

Protocol Directive: Any comments made by suspects or witnesses must be noted and reported promptly, identifying the exact circumstances of the remarks and the specific person to whom the remarks were made [source: 525, 526].

Scenario Evaluation 102

Field Context: *An arriving volunteer presents an Occasional Agents Agreement form at the entrance building window.*

Question: Where must active copies of these non-employee service agreements be filed and maintained?

Protocol Directive: A current file of all active agreements and contracts must be maintained by the Front Entrance Building Officer, and duplicate tracking indexes are filed directly in the Warden's Office [cite: BMU 1.03.00, VI.C].

Scenario Evaluation 103

Field Context: *An officer is tracking an inmate who has been placed into single-cell punitive segregation housing.*

Question: What structural height restriction applies to the construction of bunks inside these units?

Protocol Directive: Each cell within the restrictive housing block must be maintained with fully functioning lights, toilet, and lavatory hardware, and must contain a bunk constructed at least twelve (12) inches off the floor line [source: 715, 716].

Scenario Evaluation 104

Field Context: A team is utilizing an electronic restraint device (ERD) during an emergency forced cell movement.

Question: What visual capture requirement must be maintained throughout the tactical entry sequence?

Protocol Directive: The entire tracking sequence of a planned cell movement or ERD deployment must be recorded via audio-visual camera equipment, reviewed by command staff, and archived securely as evidence [source: 534, 571, 730].

Scenario Evaluation 105

Field Context: A newly assigned lieutenant is auditing the weekly cleaning logs for the medical infirmary work hub.

Question: What document defines the specific standard instructions and duties assigned to this security post?

Protocol Directive: All staff must follow the specific correctional Post Orders for their post to stay fully abreast of all standard operational duties, changes, and safety guidelines [source: 366, 367].

Scenario Evaluation 106

Field Context: A physical use of force occurs unexpectedly during a routine yard turnout sequence.

Question: What specific recording directive applies to staff if an immediate threat allows no time for a pre-planned team camera setup?

Protocol Directive: In an immediate use of force scenario where a planned setup is impossible, staff must obtain an audio-visual camera and begin recording the event as soon as it becomes operationally feasible [source: 572].

Scenario Evaluation 107

Field Context: A major equipment breakdown occurs on the central surveillance recorder hard drive system inside Master Control.

Question: What documentation pathway must the Shift Supervisor execute immediately upon hardware failure?

Protocol Directive: The Shift Supervisor must immediately document the system failure by filling out and submitting both an official Incident Report and an immediate maintenance repair request [source: 282].

Scenario Evaluation 108

Field Context: A certified tracking dog handler is preparing the canine chase team to deploy following an escape alert.

Question: What is the strict launch readiness timeline required for the canine unit under post orders?

Protocol Directive: Upon formal notification of an escape or chase by proper command authorities, the Canine Unit/Dog Kennel post must ensure that the tracking dogs are completely ready to depart within a maximum of fifteen (15) minutes [source: 670].

Scenario Evaluation 109

Field Context: An inmate trainer inside the Paws in Prison canine block is accidentally nipped by a dog during a training routine.

Question: What medical and administrative paperwork chain is triggered by an animal bite?

Protocol Directive: The injured person must be referred immediately to medical staff. Inmate trainers who are bitten must complete a Witness Statement form, and the observing officer must submit a 005 Incident Report before the end of the shift [source: 762-765].

Scenario Evaluation 110

Field Context: A security officer intercepts an inmate attempting to smuggle an altered electronic asset out of the vocational school section.

Question: What screening requirement must all inmates clear when entering or leaving the school area?

Protocol Directive: All inmates must pass cleanly through the structural metal detector when entering or exiting the school area. Any items laid in the tray must be thoroughly inspected by the school security officer [cite: School Post Orders, II.2].

Scenario Evaluation 111

Field Context: A female correctional officer is assigned to conduct an evening security round through an all-male housing tier.

Question: What announcement mandate must be executed and logged prior to entering the male living quarters?

Protocol Directive: Female staff members must clearly announce their presence in male inmate housing areas prior to entry, and the exact time of the announcement must be documented in the block security log [cite: 8 Barracks Post Orders, II.O, P].

Scenario Evaluation 112

Field Context: A transportation officer is preparing a department vehicle for an off-site inmate movement run.

Question: What checking process must be completed regarding the vehicle metrics before loading the transport group?

Protocol Directive: The officer must thoroughly inspect the vehicle's gas, oil, other fluids, tires (including the spare tire), jack, windshield wipers, and structural lights, and execute a thorough contraband search before and after loading [cite: Regional Maintenance Sergeants or Officers Post Orders, II.A, B].
